Seagate

This SeaShield™ helps protect your drive from electrostatic damage and makes installation easier.

Installation Summary

Use DiscWizard™ software to add your new hard drive if:

- You are using Windows 3.x or Windows 95, and
- You already have a bootable hard drive.

If you can use DiscWizard, follow the instructions on the DiscWizard diskette.

If you cannot use DiscWizard:

1. Copy these instructions and the drive parameters from the top cover label before installing your drive.
2. Set the jumpers. To set the jumpers for your hard drive, refer to the jumper settings below. If you are adding a second drive, designate one as a master and the other as a slave.
3. Attach cables and mount the drive. Align pin 1 on the 40-pin interface cable with pin 1 on the hard drive. Align pin 1 on the other end of the cable with pin 1 on the system host adapter. Secure the drive using two screws per side. Do not overtighten the screws.
4. Configure BIOS setup. Run your computer's BIOS or system setup program. If LBA mode is available, enable it. If your BIOS has an Auto-detect option, select it; if not, and LBA mode is enabled, select user-defined drive type and enter the LBA drive parameters listed on the other side of this drive. If LBA mode is not available, enter the CHS drive parameters. Save the drive-type settings and exit the setup program.
5. Boot your computer from a bootable Windows 95 or DOS diskette.
6. Insert your DiscWizard diskette into drive A. Run Disk Manager from the DiscWizard diskette to partition and format your new drive or use the DOS programs FDISK and FORMAT.
7. At the DOS prompt, type A:\DM; then press ENTER.
8. Follow the onscreen Disk Manager instructions to complete the installation.

Jumpers	
	Slave
	Master or single drive
	Enable cable select
	Master with non-ATA compatible slave
	Limit drive capacity to 2.1 Gbytes (4,092 cylinders)

You're done!
